

Huynh Tan Thinh

Software Engineer

(+84) 977 393 641 | htthinh1999@gmail.com | linkedin.com/in/htthinh1999

SUMMARY

More than 5 years of working experience in Software Engineer in designing, developing, and managing robust and scalable infrastructure.

Proficient in a wide range of DevOps tools and technologies, including Docker, Kubernetes, Terraform, and CI/CD pipelines.

Experienced in both Google Cloud Platform (GCP) and Amazon Web Service (AWS) environments.

Proficient in English.

Specialties

- **Infrastructure as Code (IaC):** Strong experience in automating and standardizing infrastructure provisioning using Terraform, AWS CloudFormation & AWS CDK.
- **Containerization & Orchestration:** Proficient in Docker, Kubernetes, and Helm for application deployment, scaling, and management.
- **CI/CD Pipelines:** Skilled in setting up and maintaining continuous integration and continuous deployment pipelines for efficient and automated software delivery.
- **Cloud Platforms:** Hands-on experience with Google Cloud Platform (GKE, Cloud Run, Cloud Function, Pub/Sub, Cloud Storage) and Amazon Web Service (EKS, ECS, Lambda, ECR, S3).
- **Backend Development:** Solid background in C#, .NET Core/.NET 6, Node.js, and creating microservices.
- **Database Management:** Experienced with MySQL and MongoDB, including schema design and optimization.
- **Agile Methodologies:** Familiar with working in Agile environments and collaborating effectively within cross-functional teams.
- **Problem-Solving:** Strong analytical and troubleshooting skills to identify root causes and implement effective solutions.

TECHNICAL SKILL

- **DevOps:** Docker, Helm, Kubernetes, Terraform, CloudFormation, CI/CD, FluxCD, ArgoCD.
- **Cloud:** GCP (GKE, Cloud Run, Cloud Function, Pub/Sub, Cloud Storage), AWS (EKS, ECS, Lambda, ECR, S3).
- **Backend:** C#, Node.js, .NET Core 3.1, .NET 6/8, NestJS, Strapi, Microservices.
- **Frontend:** HTML, CSS, JS, JQuery, Bootstrap.
- **Mobile:** Flutter.
- **Databases:** MySQL, MongoDB.
- **Messaging:** RabbitMQ, Google Pub/Sub.
- **Version Control:** GitHub, GitLab.

WORK EXPERIENCE

FPT SOFTWARE

Aug 2025 – Now

Cloud Engineer (Aug 2025 – Now)

Main Duties:

- Developed APIs for frontend-backend communication, ensuring security and efficiency.
- Designed and maintained the database schema, implementing necessary optimizations for swift data retrieval.
- Set up continuous integration and continuous deployment (CI/CD) pipelines for automatic code integrations and efficient deployments.
- Managed and monitored cloud infrastructure to ensure 99% uptime.
- Collaborated with frontend developers to ensure smooth data flow and user experience.
- Fixed critical and minor bugs in existing projects.
- Refactored and optimized legacy code.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment of systems, ensuring timely updates and roll-outs.
- Implemented IaC setups to automate and standardize infrastructure provisioning.

Technologies: Golang | Python | Docker | AWS DynamoDB | Microservices | AWS Lambda | AWS CloudFormation | AWS StepFunction | AWS CDK | Buildkite | AWS EKS | ArgoCD | Helm | AWS Code Series

INFODATION VIET NAM

May 2021 – Jun 2025

Software Engineer – Viet Nam (May 2021 – Jun 2025)

Main Duties:

- Designed scalable, maintainable, and efficient technical solutions to meet complex business requirements.
- Led technical decision-making processes for feature implementation, balancing trade-offs between speed of delivery and technical debt.
- Documented code decisions and complex logic to ensure long-term maintainability and readability for future developers.
- Developed APIs for frontend-backend communication, ensuring security and efficiency.
- Designed and maintained the database schema, implementing necessary optimizations for swift data retrieval.
- Set up continuous integration and continuous deployment (CI/CD) pipelines for automatic code integrations and efficient deployments.
- Managed and monitored cloud infrastructure to ensure 99% uptime.
- Collaborated with frontend developers to ensure smooth data flow and user experience.
- Fixed critical and minor bugs in existing projects.
- Refactored and optimized legacy code.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment of systems, ensuring timely updates and roll-outs.
- Configured and maintained a Kubernetes cluster to optimize application scaling and resilience.
- Implemented Terraform setups to automate and standardize infrastructure provisioning.

Technical Support Engineer – onsite Netherlands (May 2024 – Aug 2024) 3 months

Main Duties:

- Facilitated effective communication and collaboration between the Vietnam and Netherlands teams.
- Investigated and resolved technical issues, identifying root causes and implementing appropriate solutions.
- Provided guidance and support to clients throughout the issue resolution process.

Technologies: .NET 6 | .NET Core 3.1 | MySQL | MongoDB | Docker | Kubernetes | Helm | FluxCD | Microservices | Terraform | GCP

DAO ENTERTAINMENT

Nov 2021 – Now

Cloud Engineer (Nov 2021 – Now)

Main Duties:

- Collaborated with developers to design comprehensive system architectures that support business requirements and user needs.
- Developed APIs for web portals, facilitating smooth frontend-backend interactions.
- Integrated third-party APIs to enhance platform capabilities and extend service offerings.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment processes, ensuring reliable system updates and releases.
- Configured and maintained a Kubernetes cluster, optimizing application deployment, scaling, and management.
- Implemented Terraform setups to automate and standardize infrastructure provisioning.

Technologies: .NET 6 | Node.js | Strapi | NestJS | MongoDB | Microservices | Docker | AWS EKS | AWS ECS | Helm | FluxCD | Kubernetes | GCP Cloud Run | GCP Scheduler | GCP Pub/Sub

PROJECTS

LFS – Realtime Payments (Aug 2025 – Now)

Customer: Latitude Financial Services

Team size: 15

Position: Cloud Engineer

Website url: <https://www.latitudefinancial.com.au>

Description: Spearheaded the development and integration of third-party payment processing capabilities using **Westpac QuickStream**, enhancing the platform's financial transaction handling.

Main Duties:

- Integrate with 3rd party
- Developed APIs for frontend-backend communication, ensuring security and efficiency.
- Designed and maintained the database schema, implementing necessary optimizations for swift data retrieval.
- Set up continuous integration and continuous deployment (CI/CD) pipelines for automatic code integrations and efficient deployments.
- Managed and monitored cloud infrastructure to ensure 99% uptime.
- Collaborated with frontend developers to ensure smooth data flow and user experience.
- Fixed critical and minor bugs in existing projects.
- Refactored and optimized legacy code.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment of systems, ensuring timely updates and roll outs.
- Implemented CloudFormation setups to automate and standardize infrastructure provisioning.

Technologies: Golang | Docker | AWS DynamoDB | Microservices | AWS Lambda | AWS ECS | AWS SQS | AWS CloudFormation | AWS CDK | Buildkite

PdM Cloud (Dec 2025 – Now)

Customer: Konica Minolta

Team size: 5

Position: Cloud Engineer

Website url: <https://www.konicaminolta.com/jp-ja/index.html>

Description: Re-architecting a legacy predictive maintenance system into a fully AWS-native serverless and containerized solution. The system utilizes two distinct Machine Learning models: one for batch processing printer component lifespan prediction and another for real-time image diagnostics scoring.

Main Duties:

- Architected and provisioned the entire infrastructure from scratch using AWS CloudFormation with fully managed AWS services.
- Designed AWS Step Functions state machines to orchestrate complex ETL workflows and trigger AWS Glue jobs for the printer lifetime scoring model.
- Deployed the real-time image diagnostics model on Amazon ECS (Fargate) to ensure low-latency inference and high availability.
- Built a comprehensive CI/CD pipeline using the AWS Code Series (CodeCommit, CodeBuild, CodeDeploy, CodePipeline) to automate deployment from AWS Cloud9 development environments.
- Adapted and optimized existing application code (Python) to run efficiently within AWS Lambda serverless functions for event-driven processing.

Technologies: Python | Docker | Microservices | AWS ECS | AWS Lambda | AWS SQS | AWS CloudFormation | AWS StepFunction | AWS Glue | AWS Code Series | AWS S3 | AWS Cloud9

T24Parsing (Aug 2025 – Nov 2025)

Customer: VPBank

Team size: 10

Position: DevOps Engineer

Website url: <https://www.vpbank.com.vn>

Description: Joined the Digital Banking team to operate and expand a mature AWS EKS infrastructure. Responsible for the daily provisioning of new microservices, routine infrastructure upgrades, and ensuring the reliability of critical banking data pipelines.

Main Duties:

- Infrastructure Maintenance: Managed and expanded an existing Terragrunt codebase to provision resources for new banking features while keeping the Terraform state clean and consistent.
- Cluster Operations: Administered production Amazon EKS clusters, managing upgrades and tuning the existing Karpenter autoscaling profiles to handle fluctuating transaction loads.
- Resource Provisioning: Responsible for the ongoing provisioning of AWS Lambda functions and IAM roles to support new development requirements and feature releases.
- T24 Data Pipeline: Collaborated with team to operate and optimized the Temenos T24 data ingestion pipeline, ensuring accurate data parsing into Amazon DynamoDB and S3 for downstream systems.
- CI/CD Management: Maintained CI/CD pipelines to ensure smooth deployment of new application versions and infrastructure patches.

Technologies: Python | Docker | Microservices | AWS ECS | AWS Lambda | AWS CloudFormation | AWS DynamoDB | AWS S3

Kikker (May 2021 – June 2025)

Customer: Kikker Energie B.V.

Team size: 25

Position: Software Engineer

Website url: <https://kikker.nl>

Description:

- Developed for the Netherlands-based Kikker Company, this comprehensive platform streamlines the selling and management of Electrics & Gas services. With robust features tailored to the utility sector, it facilitates effective management of resellers, customer databases, contracts, and crucial metrics associated with utility provision. A distinct feature is its ability to read meter numbers directly from devices, efficiently calculating the consumption in terms of Watt/kW for Electrics and m3 for Gas.
- The system is further enhanced with financial management tools. It is equipped to generate monthly invoices and annual bills for customers, ensuring transparency and accuracy. Resellers, a vital link in the utility chain, are also catered to with an automated commission calculation feature. To top it off, the platform supports automated payments, ensuring timely revenue collection and simplifying the payment process for customers.

Main Duties:

- Designed scalable, maintainable, and efficient technical solutions to meet complex business requirements.
- Led technical decision-making processes for feature implementation, balancing trade-offs between speed of delivery and technical debt.
- Documented code decisions and complex logic to ensure long-term maintainability and readability for future developers.
- Developed APIs for frontend-backend communication, ensuring security and efficiency.
- Designed and maintained the database schema, implementing necessary optimizations for swift data retrieval.
- Set up continuous integration and continuous deployment (CI/CD) pipelines for automatic code integrations and efficient deployments.
- Managed and monitored cloud infrastructure to ensure 99% uptime.
- Collaborated with frontend developers to ensure smooth data flow and user experience.
- Fixed critical and minor bugs in existing projects.
- Refactored and optimized legacy code.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment of systems, ensuring timely updates and roll outs.
- Configured and maintained a Kubernetes cluster to optimize application scaling and resilience.
- Implemented Terraform setups to automate and standardize infrastructure provisioning.

Technologies: .NET 6 | .NET Core 3.1 | MySQL | MongoDB | Docker | Kubernetes | Helm | FluxCD | Microservices | Terraform | GCP

Fanvibe (Nov 2022 – Now)

Customer: DAO Entertainment

Team size: 3

Position: Cloud Engineer

Description:

- This is the improvement from DTOLink or DTOLink v2. Have more integration with 3rd party, more analytics & other improvements. Migrate from normal Docker container to using AWS EKS, ECS, Lambda Function and GCP Cloud Run & Cloud Task.

Main Duties:

- Developed APIs for frontend-backend communication, ensuring security and efficiency.
- Collaborated with developers to design comprehensive system architectures that support business requirements and user needs.
- Migrate old environment from Docker container to AWS EKS & AWS ECS.
- Setup environment on AWS Elastic Kubernetes Service (EKS) and AWS Elastic Container Service (ECS).
- Setup environment on Google Cloud Run & Google Cloud Task.
- Setup CI/CD to automatic deploy.
- Implemented Terraform setups to automate and standardize infrastructure provisioning.

Technologies: MongoDB | Microservices | Docker | Kubernetes | Terraform | AWS | EKS | ECS | Lambda | GCP | Cloud Run | Cloud Task

DTOLink (Nov 2020 – Nov 2022)

Customer: DAO Entertainment

Team size: 3

Position: Cloud Engineer

Website urls:

- <https://dtolink.com>
- <https://dbio.to/daoentertainment>
- <https://mra.dfan.to/mua-cu-roi>

Description:

- Designed to empower artists and creators, this platform allows users to craft their unique music release and bio pages with diverse customization options. It stands out by not only offering a space for artists to represent their musical journey but also by pulling in real-time analytics. Integrating seamlessly with third-party giants such as Spotify, Apple Music, Deezer, and Songstats, it equips users with rich insights. Artists can access data on views, subscribers, and store performance, offering a deep dive into the reception of their tracks, albums, and overall discography. By providing both a creative outlet and analytical depth, the platform is a holistic solution for artists looking to build their online presence and gauge their industry impact.

Main Duties:

- Collaborated with developers to design comprehensive system architectures that support business requirements and user needs.

- Developed APIs for web portals, facilitating smooth frontend-backend interactions.
- Integrated third-party APIs to enhance platform capabilities and extend service offerings.
- Reviewed colleagues' code to maintain coding standards.
- Managed the verification and deployment processes, ensuring reliable system updates and releases.
- Setup environment to deploy services.
- Setup CI/CD to automatic deploy.

Technologies: Node.js | Strapi | MongoDB | RabbitMQ | Microservices | Docker

CERTIFICATIONS

Certified DevOps Generalist™ Certification (DevOps-GEN™)	2025
Infodation Scrum Master	2023

HONORS & AWARDS

Star of the year - Infodation	2023
-------------------------------	------

EDUCATION

TELECOMMUNICATION UNIVERSITY	Oct 2017 – May 2021
